

Appendix 1 – List of Ecodesign Requirements

Ecodesign requirements are a performance requirement, or an information requirement aimed at making a product, including processes taking place throughout the product's value chain, more environmentally sustainable, including:

- Improving product durability, reusability, upgradability and reparability
- Enhancing the possibility of product maintenance and refurbishment
- Making products more energy and resource-efficient
- Addressing the presence of substances that inhibit circularity
- Increasing recycled content
- Making products easier to remanufacture and recycle
- Setting rules on carbon and environmental footprints
- Limiting the generation of waste
- Improving the availability of information on product sustainability
